

Anna Filimonova

Senior Product Designer

Minsk, Belarus · Open to office, hybrid, remote work and relocation

+375 (44) 799-65-02 · annuna10@gmail.com · Telegram: [@filannette](#) · [Linkedin](#) · [Portfolio](#)

About

Product Designer with experience shipping end-to-end products across B2C and B2B — transport, logistics, banking, fintech — on Web, iOS, Android, and PWA. I consistently turn design decisions into business results: lifted booking conversion on a transport platform from 9% to 12%, cut development rework by 20–30% on a banking product. Built design systems from scratch three times, ran up to 13 parallel projects, and mentor other designers. Open to different work format and relocation.

Skills

Product & UX design: product thinking, information architecture, user flows, interaction design, UX research, usability testing, UX optimization, prototyping

Data & metrics: UX metrics, A/B testing, data analysis

AI assisted design: prototyping, concept exploration, functional mockups

Tools: Figma, Figma Make, Lovable, Claude, Framer, Adobe Photoshop/Illustrator, Miro, Notion, Jira, Confluence

Leadership: stakeholder management, cross-functional collaboration, mentorship, design reviews

Languages: Russian Native, French B1, English A2

Experience

Senior Product Designer – Twelvedevs

AtlasBus — B2C/B2B transport platform (intercity and international passenger transportation) · Web / iOS / Android · August 2025 — August 2026

- Owned design for an ecosystem of 5+ products: a B2C ticket-purchasing service and B2B tools for operators, drivers, and administrators.
- Ran full discovery on the B2C product — surveyed 100+ users, conducted 10+ interviews, built a customer journey map, ran corridor testing, and analyzed a funnel of 3.2M+ sessions/month → identified conversion drop-off points and shaped a roadmap that was greenlit for development.
- Merged the booking flow (3 steps → 1) → booking conversion rose from 9% to 12% (+3pp).
- Launched a ticket waitlist for popular routes, a rail-ticket sales integration, and a support chatbot; increased order-status transparency after payment.
- Ran quantitative, qualitative, and field research with drivers → the app redesign cut boarding time by 38% and raised driver satisfaction from 29% to 81%.
- Designed the redesign of the Pilot dispatch service based on interviews with route and traffic managers → cut trip processing time from 3 to 1.5 min (–50%), improved status transparency, and reduced dispatcher operational load.

Senior Product Designer – SaleServiceSolutions (project contract, alongside full-time role at X5)

Mobile app for servicing banking equipment (ATMs, self-service kiosks) · iOS / Android · June 2025 — August 2025

- Designed a turnkey app for automating equipment control, repair, and monitoring — from IA and navigation to hi-fi screens and specs — in 1 month, working from business-analyst documentation with no direct access to users.
- Designed flows and interfaces for 3 roles (operator, administrator, cybersecurity center), accounting for differences in access rights and areas of responsibility.
- Accounted for field-operation constraints — IMEI-based authorization, a screenshot ban, geolocation binding — reducing the risk of on-site security violations.

Senior Product Designer – X5 Tech

YMS — yard and vehicle management system (new product for distribution centers) · Desktop / Tablet · January 2025 — July 2025

- Analyzed driver registration, receiving, and shipping processes (interviews, scenario audits, training materials) → identified bottlenecks and automation opportunities for a 0-to-1 product.
- Redesigned key receiving/shipping scenarios → removed a share of manual process steps and reduced operator errors.
- Designed 50+ screens for Desktop/Tablet from wireframes to hi-fi, structuring the interface for high data density without losing clarity.

Product Designer – First Mobile Solutions

VTB Belarus — Digital Bank for individuals · Web / PWA / Android · July 2023 — December 2024

- Redesigned key user scenarios based on interviews, usability tests, and product analytics → cut the number of steps in core operations (e.g., transfers/payments) by 20%.
- Initiated an iOS-styled PWA after the native app was pulled from the App Store under sanctions → preserved service access for 40% of the iOS base, PWA usage grew from <10% to >22%.
- Owned and grew a local design system (tokens, components, templates) → sped up new feature development and simplified interface scaling.
- Streamlined design handoff to engineering → cut rework by 20–30% and sped up releases.
- Initiated and rolled out a design-review process → improved UX consistency and the quality of knowledge-sharing on the team.

UX/UI Designer – Systemnye Tekhnologii

B2B digital banking / CRM / document workflow systems / staff workstations · Web / PWA / iOS / Android · September 2020 — July 2023

- Ran up to 13 concurrent projects across 4 platforms for banks (BNB, BelVEB, Technobank, Dabrabyt, VTB, mBank, Belgazprombank) → built a prioritization and scope-management system under heavy parallel workload.
- Initiated and delivered an iOS-styled PWA after the native app was removed from the App Store → the solution was approved by leadership and became the basis for relaunching the service.
- Built design systems for 3 products (iOS/Android/Web) from scratch → unified the products under one visual language, sped up new feature development.
- Created a design-system guide and ran a workshop for business analysts → BAs started assembling high-level prototypes independently, cutting the design team's load by 15%.
- Designed complex B2B interfaces (CRM, a two-role document workflow system, staff workstations), accounting for high data density, role-based access, and legacy constraints.
- Conducted UX research, user journey mapping, and problem framing → identified growth opportunities and improved key scenarios.
- Mentored 2 junior designers: design reviews of their work, project consultations.

UX/UI Course Instructor – TeachMeSkills (alongside full-time work)

October 2023 — December 2024

- Developed course materials and mentored 12 students in the UX/UI course, guiding class projects from research to prototype.

Education

BSUIR (Belarusian State University of Informatics and Radioelectronics) — Information Technology Engineer, Bachelor's degree

TeachMeSkills — UX/UI Designer, professional training program

TeachMeSkills — UX/UI PRO, professional training program
